

## Rotatable earth couplings for the construction of tanks, pipes and associated equipment for manual connection to the workpiece

Current couplings for loads of between 400 and 4000 A equipped with workpiece clamps or permanent magnet devices have stood the test for many years. By combining various accessories, 30 different couplings may be formed for a range of applications and current intensities.

A good connection between earth and workpiece is a prerequisite for perfect manual or automatic welding.

The benefits:

- Robust design
- Connections designed to protect the cable
- Ease of handling
- Workpieces are handled with precision
- No sparking
- No welding on required
- No grinding

For series production, we supply workpiece clamps of a special design with a quick-clamping device or pneumatic clamping.

## Earth couplings for stationary tools
